

1. Draw line & bar charts to show urban and rural population of India over the years using population.csv [rural population is the difference between total population and urban population][For bar chart consider 8 yrs data]

```
In [88]: import pandas as pd
import matplotlib.pyplot as plt
import numpy as np
```

```
In [89]: df = pd.read_csv("Population.csv")
df
```

Out[89]:

	Year	Population	Yearly % Change	Yearly Change	Median Age	Fertility Rate	Density	Urban Pop %	Urban Population

3. Using a pie chart show distribution of top six selling cars [Create data as required]

```
In [95]: cars = ['Maruti Swift', 'Hyundai Creta', 'Tata Nexon', 'Mahindra XUV700', 'Toyota F
sales = [25000, 18000, 6500, 6000, 7500, 12000, 10000, 7000, 6500, 6000, 5500]

car = pd.DataFrame(
```

```

    {
        'carModel': cars,
        'sales': sales
    }
)
car

```

Out[95]:

	carModel	sales
0	Maruti Swift	25000
1	Hyundai Creta	18000
2	Tata Nexon	6500
3	Mahindra XUV700	6000
4	Toyota Fortuner	7500
5	Honda City	12000
6	Maruti Baleno	10000
7	Tata Punch	7000
8	Hyundai Venue	6500
9	Kia Seltos	6000
10	MG Hector	5500

```

In [96]: car = car.sort_values(by='sales', ascending=False).head(6)
car

```

Out[96]:

	carModel	sales
0	Maruti Swift	25000
1	Hyundai Creta	18000
5	Honda City	12000
6	Maruti Baleno	10000
4	Toyota Fortuner	7500
7	Tata Punch	7000

```

In [97]: plt.pie(car['sales'], labels=car['carModel'], autopct='%1.1f%%')
plt.show()

```

4. Using Histogram show distribution of developers by their experience [use survey_data_sample.csv]

```
In [98]: sur = pd.read_csv('survey_results_sample.csv')
sur
```

```
Out[98]:
```

	ResponseId	Age	YearsCode	CompTotal	ConvertedCompYearly
